

Acoustic Double Door Astragals

Description

Our acoustic double door astragals are designed to effectively seal off the air gaps that create sound leaks where the doors meet. Just as you need acoustic door jambs to seal off the outside vertical sides and top of your door, these astragals are used to seal off the vertical meeting point at the center of double doors.

There are different meeting stiles (astragals) made for double doors. We have astragals for when you have only one active door, or for applications where both doors are used. When both doors are active, you will need a separate stile or astragal for each door. If only one door is active, you only need a single stile or astragal for the active door.

Note: All door hardware can be factory cut to size at no additional charge. Please specify sizes when ordering. These products have a tolerance of $\pm 1/8"$.

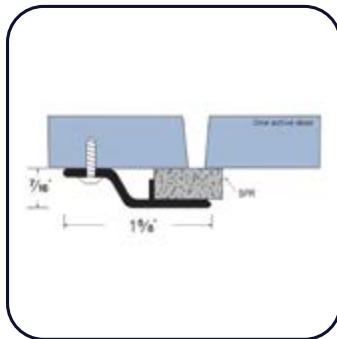

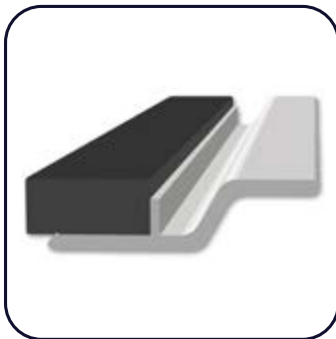

Technical Characteristics

Size:	55 – 57%
Finish:	6.5 – 7.8
Type:	8.5 – 8.7 US lbs/gal (1.0 Kg/L)

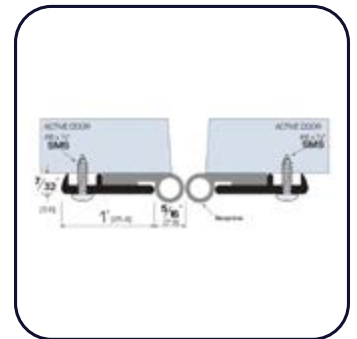

Features

- For use with wood or metal doors
