

AlphaDiffuser™ Fabric Wrapped Sound Diffuser

Description

Our AlphaDiffuser™ Fabric Wrapped Sound Diffuser is specially molded plastic, wrapped in acoustical fabric, designed to scatter or disperse acoustic energy throughout a given space. The multiple facets and angles of the AlphaDiffusers™ redirect and redistribute sound waves throughout the room, helping to eliminate hot-spots and dead-spots while maintaining a true “live” sound.

AlphaDiffusers™ come in a standard 2' x 2' size that can be wall mounted or dropped into a ceiling grid. With so many color options, the AlphaDiffuser™ Fabric Wrapped Diffuser is the perfect diffuser to match existing decor. These diffusers are for use in private facilities like home theaters, music listening rooms, recording studios and rehearsal spaces.
