

CLEANING INSTRUCTIONS

PVC Plastic

Cleaning Instructions

AlphaSorb® PVC Plastic products may be cleaned with a low concentration of a mild soap in water. The solution should be applied with a sponge or soft cloth with a gentle rubbing action. Cleaners with abrasives such as scouring powders or steel wool should be avoided. Also, cleaners that contain ketones, kerosene, or petroleum products must not be used.

If a PVC encapsulated product should become ripped or torn, it can easily be repaired with a matching PVC repair tape. If PVC tape is not available, then a clear packaging tape will work very well. As with all tapes, it is extremely important that the surface be clean and dry. When applying the tape, a sufficient amount of pressure must be used to ensure proper adhesion.
