

Rotofast Cloud Anchor

Description

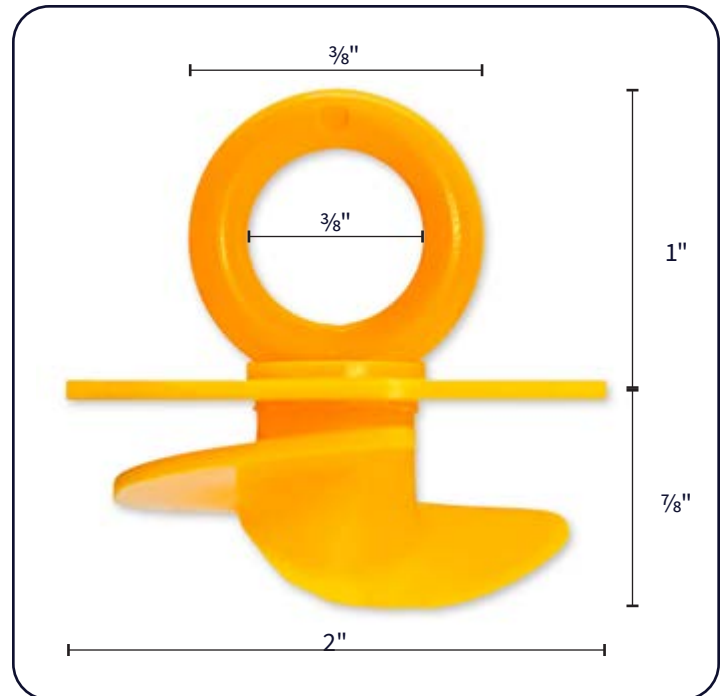

Rotofast Cloud Anchors are a fast and secure way to hang fiberglass core acoustical panels in a cloud formation. Cloud Anchors are independently positioned and installed on-site. They are strong, quick and solve a variety of the installation challenges, such as overhead obstructions and fixed architectural elements. The Rotofast Cloud Anchor is designed for acoustical cloud panels that are 1" to 1½" thick and smaller 2" thick panels.

Features

- High strength styrene eye bolt
- Non-reactive: will not chemically react with polyester binders
- For use with fiberglass core acoustical panels in a cloud formation

Technical Characteristics

Size:	2" diameter
Material:	Stabilized polypropylene plastic and high strength styrene eye bolt
Pull-Out Strength:	45lb in 6lb / ft ³ rigid fiberglass board

Revised: 2025-04-30
