

SoundSuede™ Sound Diffuser

Description

The SoundSuede™ Sound Diffusers are specially molded plastic diffusers designed to scatter or disperse acoustic energy throughout a given space. The multiple facets and angles of the SoundSuede™ Sound Diffusers redirect and redistribute sound waves throughout the room, helping to eliminate hot-spots and dead-spots while maintaining a true “live” sound. SoundSuede™ Sound Diffusers answer both your acoustical and aesthetic needs with their strong sound diffusion capabilities and elegant appearance. They are 2" thick and are available in 2' x 2', 2' x 4' and 4' x 4' sizes and a variety of colors.

The SoundSuede™ Sound Diffusers allow you to create an effective sound control treatment that is distinctly designed for your environment. They can also be mixed seamlessly into a room with 2" thick SoundSuede™ Acoustic Panels allowing for both sound diffusion and sound absorption within the room while maintaining an uninterrupted look. The SoundSuede™ Sound Diffusers are lightweight and easily installed. These diffusers are for use in private facilities like home theaters, music listening rooms, recording studios and rehearsal spaces.

Note: Finished Diffusers DO NOT have a cutout. The cutout in the product image is to display the diffuser substrate only!
